Mail: info@doccheck.com

Dear Dr. Antwerpes,

We support your initiative to establish the top-level domain ".med" as an Internet address for medical content. The domain .med would provide members of the healthcare industry and medical institutions on the Internet with their own specific clearly identifiable address. If it were placed exclusively at the disposal of the medical community, the top-level domain .med could then become established as a quality standard.

For this reason we support the application of DocCheck with the ICANN as registrar of the domain. We believe that DocCheck is suitable to be administrator of the domain, acting as a trustee of the medical community, and will ensure the exclusivity of the top-level domain .med for medical content.

Best regards,

Kalpajit Banik

Geachte Dr. Antwerpes,

We ondersteunen uw initiatief om het topdomein ".med" als internetadres voor pagina's met medische inhoud te vestigen. Het domein ". med" zou mensen, actief in medische beroepen en medische instituten, een eigen, duidelijk te definiëren adres op het internet toewijzen. Het topdomein ".med" zou zich kunnen profileren als kwaliteitslabel omdat het uitsluitend beschikbaar zou zijn voor de medische gemeenschap.

Daarom ondersteunen wij de sollicitatie van DocCheck bij ICANN om te functioneren als beheerder van het domein. We geloven dat DocCheck geschikt is om het domein als trustee van de medische community te beheren en om de exclusiviteit van het topdomein ".med" te verzekeren voor pagina's met medische inhoud.

Met vriendelijke groeten,

Dr.Ir. Harm-jan Wieringa

Estimado Dr. Antwerpes,

Apoyamos su iniciativa de establecer el dominio de alto nivel ".med" como una dirección de Internet específica para contenidos médicos. El dominio .med sólo podría ser utilizado por profesionales de la salud e instituciones médicas, y constituiría una dirección de internet específica y claramente diferenciable. El dominio de alto nivel .med podría convertirse en un baremo de calidad solamente si su uso se restringe a la comunidad médica.

Por ello apoyamos la aplicación de DocCheck en el ICANN en calidad de registrador de dominio. Creemos que DocCheck está calificado para administrar el dominio en nombre de la comunidad médica y para garantizar que el dominio de alto nivel se utilice exclusivamente para contenidos médicos.

Atentamente,

Albert Arnó

Dear Dr. Antwerpes,

Pharma Marketing News and Pharma Marketing Network support your initiative to establish the top-level domain ".med" as an Internet address for medical content. The domain .med would assign members of the healthcare industry and medical institutions on the Internet with their own, clearly identifiable address. The top-level domain .med could be established as a quality standard if it were exclusively at the medical community's disposal.

For this reason we are backing the application of DocCheck with the ICANN as registrar of the domain. We believe that DocCheck is able to manage the domain as a trustee of the medical community and provide for the exclusivity of the top-level domain .med for medical content.
