

Public Interest Registry 27. Registration Life Cycle

Public Interest Registry (PIR) has been successfully managing .ORG, one of the internet's original gTLDs, for over nine years. PIR uses Afilias Limited as the registry backend service provider who will also support .ONG. Afilias has experience managing registrations for over a decade and supports comprehensive registration lifecycle services including the registration states, all standard grace periods, and can address any modifications required with the introduction of any new ICANN policies.

.ONG will follow the ICANN standard domain lifecycle, similar to other gTLDs, such as .ORG. There are four main phases in the lifecycle of a .ONG domain name. These include: 1) the Registration period, 2) the Auto-renew grace period, 3) the Redemption grace period, and 4) the Pending delete period. An additional two-step verification process is required within the registration period to verify that the registrant is a *bona fide* member of the NGO Community. The response below includes a description of a domain lifecycle, including domain creation, transfer protocols, grace period implementation, and the respective time frames for each, as well as, a summary of the resources needed to support them. All .ONG domains are subject to the policies defined in Evaluation Questions #20e and #29.

As depicted in figure 27-a, prior to the beginning of the Trademark Claims Service or Sunrise IP protection program, PIR, through Afilias, will support the reservation of names in accordance with the new gTLD Registry Agreement, Specification 5.

1. Registration Period

After the IP protection program and the general launch, eligible registrants may choose to register a .ONG domain name through an ICANN accredited registrar. The registrar will check availability on the requested domain name and if available, will collect required contact and host (nameserver) information and provision this information into the registry system using standard Extensible Provisioning Protocol (EPP) commands through a secure connection to the registry backend service provider.

During the registration process (see figure 27-b), the registrant will be asked to verify their eligibility and to demonstrate affiliation with a NGO member organization. Once the initial certification in step 1 of the verification process is confirmed, the domain is successfully created. If the NGO registrant fails to provide any additional required information through step 2 of the verification process, the domain will be deleted and released back into the pool of available domains. See Evaluation Question #20e for detail on eligibility requirements.

When the domain is created, the standard five day Add Grace Period begins, the domain and contact information are available in WHOIS, and normal operating EPP domain statuses will apply.

Add Grace Period

The Add Grace Period displays as ADDPERIOD in WHOIS and is set to five calendar days following the initial registration of a domain. If the domain is deleted by the registrar during this period, the registry provides a credit to the registrar for the cost of the registration. If a Delete, Renew/Extend, or Transfer operation occurs within the five calendar days, the following rules apply.

- <u>Delete</u>. If a domain is deleted within this period the sponsoring registrar at the time of the deletion is credited for the amount of the registration. The domain is deleted from the registry backend service provider's database and is released back into the pool of available domains.
- <u>Renew/Extend</u>. If the domain is renewed within this period and then deleted, the sponsoring
 registrar will receive a credit for both the registration and the extended amounts. The account of

the sponsoring registrar at the time of the renewal will be charged for the initial registration plus the number of years the registration is extended. The expiration date of the domain registration is extended by that number of years as long as the total term does not exceed 10 years.

<u>Transfer</u> (other than ICANN-approved bulk transfer). Transfers under Part A of the ICANN Policy
on Transfer of Registrations between registrars may not occur during the ADDPERIOD or at any
other time within the first 60 days after the initial registration. Enforcement is the responsibility of
the registrar sponsoring the domain name registration and is enforced by the Shared Registration
System (SRS).

Other specifics regarding registration rules for a .ONG active domain include:

- The domain must be unique;
- Restricted or reserved domains cannot be registered;
- The domain can be registered from 1-10 years;
- The domain can be renewed at any time for 1-10 years, but cannot exceed 10 years;
- The domain can be explicitly deleted at any time;
- The domain can be transferred from one registrar to another except during the first 60 days following a successful registration or within 60 days following a transfer; and,
- Contacts and hosts can be modified at any time.

The following describe the .ONG domain status values recognized in WHOIS when using the EPP protocol following RFC 5731.

- OK or Active: This is the normal status for a domain that has no pending operations or restrictions.
- *Inactive*: The domain has no delegated name servers.
- Locked: No action can be taken on the domain. The domain cannot be renewed, transferred, updated, or deleted. No objects such as contacts or hosts can be associated to, or disassociated from the domain. This status includes: Delete Prohibited / Server Delete Prohibited, Update Prohibited / Server Update Prohibited, Transfer Prohibited, Server Transfer Prohibited, Renew Prohibited.
- Hold: The domain will not be included in the zone. This status includes: Client Hold. Server Hold.
- *Transfer Prohibited*: The domain cannot be transferred away from the sponsoring registrar. This status includes: *Client Transfer Prohibited*, *Server Transfer Prohibited*.

The following describe the registration operations that apply to the domain name during the registration period.

- a) **Domain Modifications**: This operation allows for modifications or updates to the domain attributes to include:
 - i. Registrant Contact
 - ii. Admin Contact
 - iii. Technical Contact
 - iv. Billing Contact
 - v. Host or nameservers
 - vi. Authorization information
 - vii. Associated status values

A domain with the EPP status of *Client Update Prohibited* or *Server Update Prohibited* may not be modified until the status is removed.

- b) **Domain Renewals**: This operation extends the registration period of a domain by changing the expiration date. The following rules apply:
 - i. A domain can be renewed at any time during its registration term,
 - ii. The registration term cannot exceed a total of 10 years.

A domain with the EPP status of *Client Renew Prohibited* or *Server Renew Prohibited* cannot be renewed.

- c) **Domain Deletions**: This operation deletes the domain from the SRS. The following rules apply:
 - . A domain can be deleted at any time during its registration term,

- ii. If the domain is deleted during the Add Grace Period or the Renew/Extend Grace Period, the sponsoring registrar will receive a credit,
- iii. A domain cannot be deleted if it has "child" nameservers that are associated to other domains.

A domain with the EPP status of *Client Delete Prohibited* or *Server Delete Prohibited* cannot be deleted.

- d) **Domain Transfers**: A transfer of the domain from one registrar to another is conducted by following the steps below.
 - i. The registrant must obtain the applicable <authlnfo> code from the sponsoring (losing) registrar.
 - Every domain name has an <authlnfo> code as per EPP RFC 5731. The
 <authlnfo> code is a six- to 16-character code assigned by the registrar at the time the name was created. Its purpose is to aid identification of the domain owner so proper authority can be established (it is the "password" to the domain).
 - Under the Registry-Registrar Agreement, registrars will be required to provide a copy of the <authlnfo> code to the domain registrant upon his or her request.
 - ii. The registrant must provide the <authlnfo> code to the new (gaining) registrar, who will then initiate a domain transfer request. A transfer cannot be initiated without the <authlnfo> code.
 - Every EPP <transfer> command must contain the <authlnfo> code or the request will fail. The <authlnfo> code represents authority to the registry to initiate a transfer.
 - iii. Upon receipt of a valid transfer request, the registry automatically asks the sponsoring (losing) registrar to approve the request within five calendar days.
 - When a registry receives a transfer request the domain cannot be modified, renewed or deleted until the request has been processed. This status must not be combined with either Client Transfer Prohibited or Server Transfer Prohibited status.
 - If the sponsoring (losing) registrar rejects the transfer within five days, the transfer request is cancelled. A new domain transfer request will be required to reinitiate the process.
 - If the sponsoring (losing) registrar does not approve or reject the transfer within five days, the registry automatically approves the request.
 - iv. After a successful transfer, it is strongly recommended that registrars change the <authlnfo> code, so that the prior registrar or registrant cannot use it anymore.
 - v. Registrars must retain all transaction identifiers and codes associated with successful domain object transfers and protect them from disclosure.
 - vi. Once a domain is successfully transferred the status of TRANSFERPERIOD is added to the domain for a period of five days.
 - vii. Successful transfers will result in a one year term extension (resulting in a maximum total of 10 years), which will be charged to the gaining registrar.
- e) **Bulk Transfer**: PIR, through Afilias, supports bulk transfer functionality within the SRS for situations where ICANN may request the registry to perform a transfer of some or all registered objects (includes domain, contact and host objects) from one registrar to another registrar. Once a bulk transfer has been executed, expiry dates for all domain objects remain the same, and all relevant states of each object type are preserved. In some cases the gaining and the losing registrar as well as the registry must approved bulk transfers. A detailed log is captured for each bulk transfer process and is archived for audit purposes.

PIR will support ICANN's Transfer Dispute Resolution Process. PIR will work with Afilias to respond to Requests for Enforcement (law enforcement or court orders) and will follow that process.

2. Auto-Renew Grace Period

The Auto-Renew Grace Period displays as AUTORENEWPERIOD in WHOIS. An auto-renew must be requested by the registrant through the sponsoring registrar and occurs if a domain name registration is

not explicitly renewed or deleted by the expiration date and is set to a maximum of 45 calendar days. In this circumstance the registration will be automatically renewed by the registry system the first day after the expiration date. If a Delete, Extend, or Transfer occurs within the AUTORENEWPERIOD the following rules apply:

- <u>Delete</u>. If a domain is deleted the sponsoring registrar at the time of the deletion receives a credit for the auto-renew fee. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.
- ii. <u>Renew/Extend</u>. A domain can be renewed as long as the total term does not exceed 10 years. The account of the sponsoring registrar at the time of the extension will be charged for the additional number of years the registration is renewed.
- iii. <u>Transfer</u> (other than ICANN-approved bulk transfer). If a domain is transferred, the losing registrar is credited for the auto-renew fee, and the year added by the operation is cancelled. As a result of the transfer, the expiration date of the domain is extended by minimum of one year as long as the total term does not exceed 10 years. The gaining registrar is charged for the additional transfer year(s) even in cases where a full year is not added because of the maximum 10 year registration restriction.

3. Redemption Grace Period

During this period, a domain name is placed in the PENDING DELETE RESTORABLE status when a registrar requests the deletion of a domain that is not within the Add Grace Period. A domain can remain in this state for up to 30 days and will not be included in the zone file. The only action a registrar can take on a domain is to request that it be restored. Any other registrar requests to modify or otherwise update the domain will be rejected. If the domain is restored it moves into PENDING RESTORE and Server Renew Prohibited, Server Delete Prohibited, Server Update Prohibited, Server Update Prohibited, and then OK once a restore report is received from the registrar of record. After 30 days if the domain is not restored it moves into PENDING DELETE SCHEDULED FOR RELEASE before the domain is released back into the pool of available domains.

4. Pending Delete

During this period, a domain name is placed in PENDING DELETE SCHEDULED FOR RELEASE status for five days, and all Internet services associated with the domain will remain disabled and domain cannot be restored. After five days the domain is released back into the pool of available domains.

Other Grace Periods

All ICANN required grace periods will be implemented in the registry backend service provider's system including the Add Grace Period (AGP) described above, Renew/Extend Grace Period (EGP), Transfer Grace Period (TGP), Auto-Renew Grace Period (ARGP), and Redemption Grace Period (RGP). The lengths of grace periods are configurable in the registry system. At this time, the grace periods will be implemented following other gTLDs such as .ORG. More than one of these grace periods may be in effect at any one time. The following are accompanying grace periods to the registration lifecycle.

Renew / Extend Grace Period

The Renew / Extend Grace Period displays as RENEWPERIOD in WHOIS and is set to five calendar days following an explicit renewal on the domain by the registrar. If a Delete, Extend, or Transfer occurs within the five calendar days, the following rules apply:

- i. <u>Delete</u>. If a domain is deleted within this period the sponsoring registrar at the time of the deletion receives a credit for the renewal fee. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.
- ii. <u>Renew/Extend</u>. A domain registration can be renewed within this period as long as the total term does not exceed 10 years. The account of the sponsoring registrar at the time of the extension will be charged for the additional number of years the registration is renewed.
- iii. <u>Transfer</u> (other than ICANN-approved bulk transfer). If a domain is transferred within the Renew/Extend Grace Period, there is no credit to the losing registrar for the renewal fee. As a result of the transfer, the expiration date of the domain registration is extended by a minimum of one year as long as the total term for the domain does not exceed 10 years.

Public Interest Registry
.ONG new gTLD Application
27. Registration Life Cycle (*Cont.*)

If a domain is auto-renewed, then extended, and then deleted within the Renew/Extend Grace Period, the registrar will be credited for any auto-renew fee charged and the number of years for the extension. The years that were added to the domain's expiration as a result of the auto-renewal and extension are removed. The deleted domain is moved to the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.

Transfer Grace Period

The Transfer Grace period displays as TRANSFERPERIOD in WHOIS and is set to five calendar days after the successful transfer of domain name registration from one registrar to another registrar. Transfers under Part A of the ICANN Policy on Transfer of Registrations between registrars may not occur during the TRANSFERPERIOD or within the first 60 days after the transfer. If a Delete or Renew/Extend occurs within that five calendar days, the following rules apply:

- i. <u>Delete</u>. If the domain is deleted by the new sponsoring registrar during this period, the registry provides a credit to the registrar for the cost of the transfer. The domain then moves into the Redemption Grace Period with a status of PENDING DELETE RESTORABLE.
- ii. <u>Renew/Extend</u>. If a domain registration is renewed within the Transfer Grace Period, there is no credit for the transfer. The registrar's account will be charged for the number of years the registration is renewed. The expiration date of the domain registration is extended by the renewal years as long as the total term does not exceed 10 years.

Overlapping Grace Periods

If an operation is performed that falls into more than one grace period, the actions appropriate for each grace period apply (with some exceptions as noted below).

If a domain is deleted within the Add Grace Period and the Renew/Extend Grace Period, then the registrar is credited the registration and extend amounts, taking into account the number of years for which the registration and extend were done. The domain is removed from the registry database and is immediately available for registration by any registrar.

If a domain is auto-renewed, then extended, and then deleted within the Renew/Extend Grace Period, the registrar will be credited for any auto-renew fee charged and the number of years for the extension. The years that were added to the domain's expiration as a result of the auto-renewal and extension are removed. The deleted domain is moved to the Redemption Grace Period (that is, to the status: PENDING DELETE RESTORABLE).

Overlap Exceptions

If a domain is deleted within one or several Transfer Grace Periods, then only the current sponsoring registrar is credited for the transfer amount. For example, if a domain is transferred from Registrar A to Registrar B and then to Registrar C and finally deleted by Registrar C within the Transfer Grace Period of the first and second transfers, then only the last transfer is credited to Registrar C.

If a domain registration is extended within the Transfer Grace Period, then the current registrar's account is charged for the number of years the registration is extended.

Resource Plans

PIR will devote resources to support the registrar onboarding and sign-up process, marketing campaigns, the domain registration lifecycle, and any dispute resolution processes necessary, similar to its current role in maintaining the .ORG domain. The registry operator anticipates having 1 compliance officer to handle disputes as they arise, although currently for .ORG this need is rare.

Since its founding, Afilias has focused on delivering secure, stable and reliable registry services. Several essential management and staff who designed and launched the Afilias registry in 2001 and expanded the number of TLDs supported, all while maintaining strict service levels over the past decade, are still in place today. This experiential continuity will endure for the implementation and ongoing maintenance of the .ONG gTLD. Afilias operates in a matrix structure, which allows its staff to be allocated to various

critical functions in both a dedicated and a shared manner. With a team of specialists and generalists, the project management methodology allows efficient and effective use of staff to focus on all aspects of the registration lifecycle.

Afilias has its development and quality assurance departments on hand to modify the grace period functionality as needed, if ICANN issues new consensus policies or the RFCs change. Afilias has more than 30 staff members in these departments.
