

**Figure 26-1: Whois Service Network Diagram.** *By distributing Whois service across multiple resolution sites, Whois transactions are highly available and performed with low latency.* 

Component	Implementation/Configuration
Load Balancers	<ul> <li>Deployed as a pair for maximum availability and resilience.</li> </ul>
	Help ensure workload is evenly distributed across all systems within the
	.pitney gTLD resolution network.
Layer-3 Switches	• Four switches are installed in Verisign's resolution network environment:
	two for front-office management, and two for back-office management.
	<ul> <li>Switches provide both routing and switching for the .pitney gTLD environment across the front-office network.</li> </ul>
Terminal Servers	<ul> <li>Deployed as a pair of terminal servers to enable out-of-band management</li> </ul>
	of all network hardware.
	• Used in the event that primary network access is unavailable at Verisign's
	primary resolution sites.
Virtual Private	Pair of VPNs installed at each of Verisign's primary resolution sites for
Networks (VPN)	secure remote access to the installed systems.
Commodity Servers	Supporting Whois data processing needs, each commodity server consists of
	the following specifications:
	<ul> <li>Two central processing units (CPUs)</li> </ul>
	• 2 – 6 gigabytes (GB) random access memory (RAM) (as dictated by the
	server function)
	2x73GB hard drive
Database Servers	Supporting Whois data processing needs, each database server consists of
	the following specifications:
	<ul> <li>16 cores (4 x quad-core CPUs)</li> </ul>
	• 64GB RAM
	5x73GB hard drive
Figure 26-2: Whois IT and Infrastructure Resources Verisign uses a common Whois resolution	

**Figure 26-2: Whois IT and Infrastructure Resources.** Verisign uses a common Whois resolution network architecture at each primary site provisioning the Whois service.

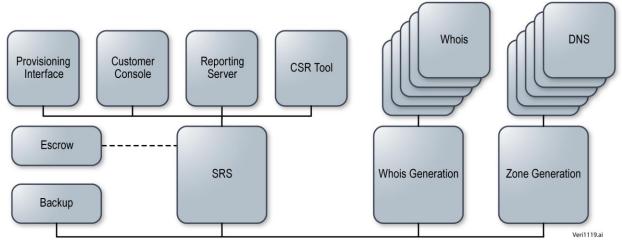

Figure 26-3: Technical Overview. Verisign's Whois services are co-located at DNS locations.
