

Chinese IDN Language Table:

Language Tag:	zh
Language Description:	Chinese
Version:	1.0
Effective Date:	Initial go-live
Registry:	ARI SRS
Contact Name:	IDN Support
Contact Email:	support@ariservices.com
Contact Phone:	+61.398663710

Notes:

The following is a list of the code points available for use in registrations utilising the 'zh' language tag.

The code points are given in their Unicode code point format: U+XXXX, where X is a hexadecimal digit. This table also includes 61 code points from the Supplementary Ideographic Plane. Such code points are given in their code point format: U+XXXXX, where X is a hexadecimal digit.

The second code point on each line (if any) identifies the canonical code point for the code point under consideration. Where the canonical code point is not defined the canonical code point is considered to be the code point under consideration itself.

All code points in a domain name are substituted with their canonical form to generate a unique 'key' for that name. This canonical form is used internally to block registration of variant names. The canonical 'key' is shared by all variants of a domain name, and is otherwise unique.

The registry may automatically activate variants based on name that is registered. These specific rules regarding which variants are activated, otherwise known as preferred variants, are described in the registration policy.
