

Arabic IDN Language Table:

Language Tag: ar

Language Description: Arabic

Version: 2.0

Effective Date: 02 April 2012

Registry: aeDA

Contact Name: IDN Support

Contact Email: support@aeda.ae

Contact Phone: +971.42300018

Notes:

The following code points are given in their Unicode code point format: U+XXXX, where X is a hexadecimal digit.

The following is a list of the code points available for use in registrations utilizing the 'ar' language tag.

This table conforms to the recommendations in RFC4290.

The second code point on each line (if any) identifies the canonical code point for the code point under consideration. Where the canonical code point is not defined, the canonical code point is considered to be the code point under consideration itself.

All code points in a domain name are substituted with their canonical form to generate a unique 'key' for that name. This canonical form is used internally to block registration of variant names. The canonical 'key' is shared by all variants of a domain name, and is otherwise unique.

Both the Arabic-Indic and Latin digits are available for registration. Homogeneity is enforced by the domain name registry.
