

**Figure 26-1: Whois Service Network Diagram.** *By distributing Whois service across multiple resolution sites, Whois transactions are highly available and performed with low latency.* 

Load Balancers	<ul> <li>Deployed as a pair for maximum availability and resilience.</li> </ul>
	Help ensure workload is evenly distributed across all systems within the
	.bosch gTLD resolution network.
	<ul> <li>Four switches are installed in Verisign's resolution network environment: two for front-office management, and two for back-office management.</li> </ul>
	<ul> <li>Switches provide both routing and switching for the .bosch gTLD</li> </ul>
	environment across the front-office network.
Terminal Servers	Deployed as a pair of terminal servers to enable out-of-band management
	of all network hardware.
	<ul> <li>Used in the event that primary network access is unavailable at Verisign's</li> </ul>
	primary resolution sites.
Virtual Private	<ul> <li>Pair of VPNs installed at each of Verisign's primary resolution sites for</li> </ul>
Networks (VPN)	secure remote access to the installed systems.
	Supporting Whois data processing needs, each commodity server consists of
	the following specifications:
	<ul> <li>Two central processing units (CPUs)</li> </ul>
	• 2 – 6 gigabytes (GB) random access memory (RAM) (as dictated by the
	server function)
	2x73GB hard drive
Database Servers	Supporting Whois data processing needs, each database server consists of
	the following specifications:
	<ul> <li>16 cores (4 x quad-core CPUs)</li> </ul>
	• 64GB RAM
	<ul> <li>5x73GB hard drive</li> </ul>

**Figure 26-2: Whois IT and Infrastructure Resources.** *Verisign uses a common Whois resolution network architecture at each primary site provisioning the Whois service.* 

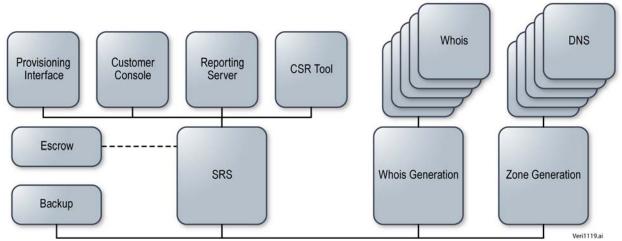

Figure 26-3: Technical Overview. Verisign's Whois services are co-located at DNS locations.

Name Server Data **Query format:** whois "NS1.EXAMPLE.TLD" or whois "name server (IP address)" Response format: Server Name: NS1.EXAMPLE.TLD IP Address: 192.0.2.123 IP Address: 2001:0DB8::1 Registrar: Example Registrar, Inc. Whois Server: whois.example-registrar.tld Referral URL: http://www.example-registrar.tld >>> Last update of Whois database: 2009-05-29T20:15:00Z <<<

Figure 26-6: Name Server Data Object

Potential Abusive Searchable Whois Risks	Verisign Risk Mitigation
Single Source Data Mining The mining of Whois data from a single IP address conducted through manual queries	Access Control Lists (ACL): Implementation of an ACL at the network layer to block the offending IP address for a specified period of time; viable option given a single unique IP address Application Rate Limiting: Implementation of rate-limiting at the application layer to regulate the number of queries allowed from the source IP address for a specified period of time; viable option given a single unique IP address
Automated Data Mining Single Source: The mining of Whois data from a single IP address conducted through the use of automated scripts Distributed: The mining of Whois data from multiple sources/IP addresses conducted through the use of automated scripts, or, "botnets"	ACL and Application Rate Limiting as defined for single source data mining Packet Inspection: Implementation of tools that analyze the incoming "get" request to determine whether the source is a valid user or whether the request is coming from an automated script or botnet; viable option based on "get" request signature Completely Automated Public Turing Test To Tell Computers And Humans Apart (CAPTCHA) Techniques: Implementation of a challenge-response test prior to processing the request; viable option that limits ability to predict challenge-response; almost always requires manual interaction

**Figure 26-7: Potential Searchable Whois Forms of Abuse and Mitigation.** *Verisign leverages its experience supporting the .name registry to build in to the system the safeguards necessary to minimize abusive Whois practices.*
